

Become Data Driven with Azure Synapse Analytics

Architecture, Engineering & Construction

Q&As from the Live Webinar

- **Where can I find learning resources about Azure Synapse?**

You can start with below learning paths (free and digital): - Work with Data Warehouses using Azure Synapse Analytics <https://docs.microsoft.com/en-us/learn/paths/work-with-data-warehouses-using-azure-synapse-analytics/> - Perform data engineering with Azure Synapse Apache Spark Pools <https://docs.microsoft.com/en-us/learn/paths/perform-data-engineering-with-azure-synapse-apache-spark-pools/> - Build data analytics solutions using Azure Synapse serverless SQL pools <https://docs.microsoft.com/en-us/learn/paths/build-data-analytics-solutions-using-azure-synapse-serverless-sql-pools/> - Realize Integrated Analytical Solutions with Azure Synapse Analytics <https://docs.microsoft.com/en-us/learn/paths/realize-integrated-analytical-solutions-with-azure-synapse-analytics/> - Work with Hybrid Transactional and Analytical Processing Solutions using Azure Synapse Analytics <https://docs.microsoft.com/en-us/learn/paths/work-with-hybrid-transactional-analytical-processing-solutions/>

- **Where can I read more about the pricing of Azure Synapse?**

You can read about the pricing of Azure Synapse Analytics here: <https://azure.microsoft.com/en-us/pricing/details/synapse-analytics/> For estimating various scenarios I recommend the Azure Calculator: <https://azure.microsoft.com/en-us/pricing/calculator/> There is also a limited-time offer for free quantities of Azure Synapse Analytics available now if you want to test it: <https://azure.microsoft.com/en-us/blog/limited-time-free-quantities-offer-for-azure-synapse-analytics/>

- **By converting your earlier architecture from MVP (ADF %2B Azure Database %2B PBI) into Platform AIR with Synapse, what immediate benefits you achieved over MVP design?**

I would say flexibility, speed and more options. There are still things that you cannot do by only using ADF, so in those cases it is easier to either do it in Notebooks, and / or using the SQL-on demand for accessing the Lake layer directly without persistent storage in the SQLDB.

- **You mentioned that you made an API layer for consumption of data. Can consumption of Power BI data through an API be done through a specific Synapse component?**

The API we have set up, is for data consumption from the SQL Pool on demand layer. So not specifically from Power BI. It is not through any specific synapse component other than Notebooks.

Trends intensifying with the pandemic impact

Cost pressure– House affordability and infrastructure costs magnified

70% average project cost overrun
Building costs 13 year all high

Safety & Sustainability– stricter regulation and business scrutiny

30% less energy buildings intensity by 2030
20% fatalities are in Construction

Demanding customers– TCO, digital interactions, flexible greener structures

74% Customer focus shift till 2025

Technology investments– differentiating with digital abilities

40% CAGR funding construction technology

Integrated value-chain – for control and resilience, driving M&A and collaboration

50% increased investments after Covid

Modularization – enabling off-site construction and productization

2.4 X Revenue growth 2015-18

Sustainability is becoming core –
and that makes digital even more critical

"We see significant potential for technology-enabled sustainability, e.g. for resilience, including the reduction of emissions, and cybersecurity or efficiency through digital technologies and innovation."

Head of Network Commercial Operations, Viesgo

"The merge between technology and sustainability has opened us to new business models and opportunities that did not exist before. Particular in the context of circular economy and the transitions from products to services."

HSQ&E Director, Ferrovial

Attributes of successful transformations

Data culture

Driving data-centric,
impact-oriented behavior

Data capabilities

Enabling innovation excellence

"Data culture is about empowering every organization, every team, and every individual to do great things because of the data at their fingertips."

-Satya Nadella

The digital feedback loop

Analytics & AI play a pivotal role for organizations at all times

Address disruptions
in business processes

Save on costs &
reduce CAPEX

How we helped MESTA's become data-driven:

- Business need
- Technical solution
- Business impact

Who is Mesta?

- Owned by the Norwegian government
- 1600+ employees
- 4.5 billion NOK turnover yearly
- Reorganization in 2019
 - Economy & Finance
 - Organization & Sustainability
 - Innovation & Business development

Business need

Contracts and Bids

Truck information (IoT sensor data)

Storage, Inventory, Rent

Positional and geographical data

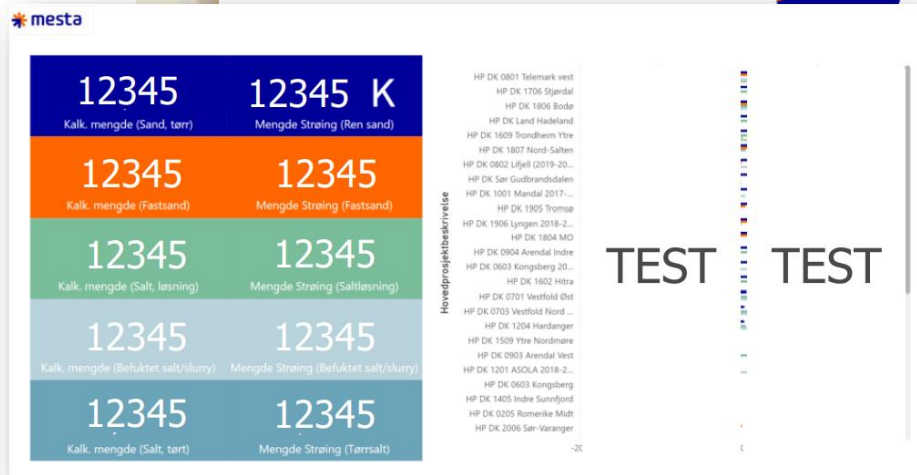

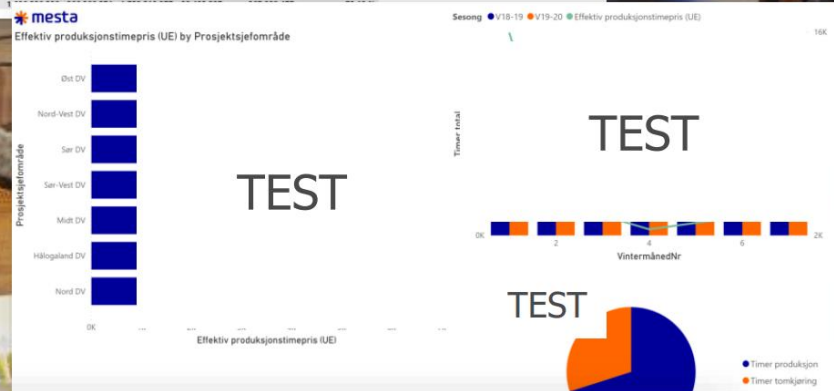

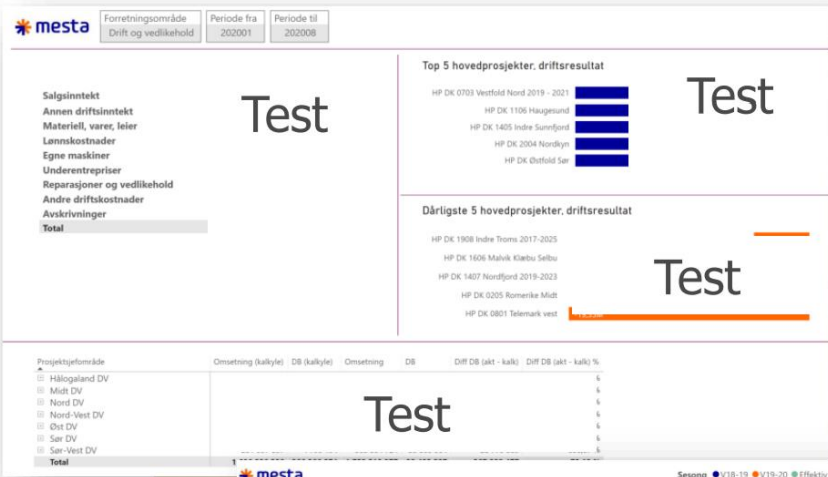

Material and service purchase orders

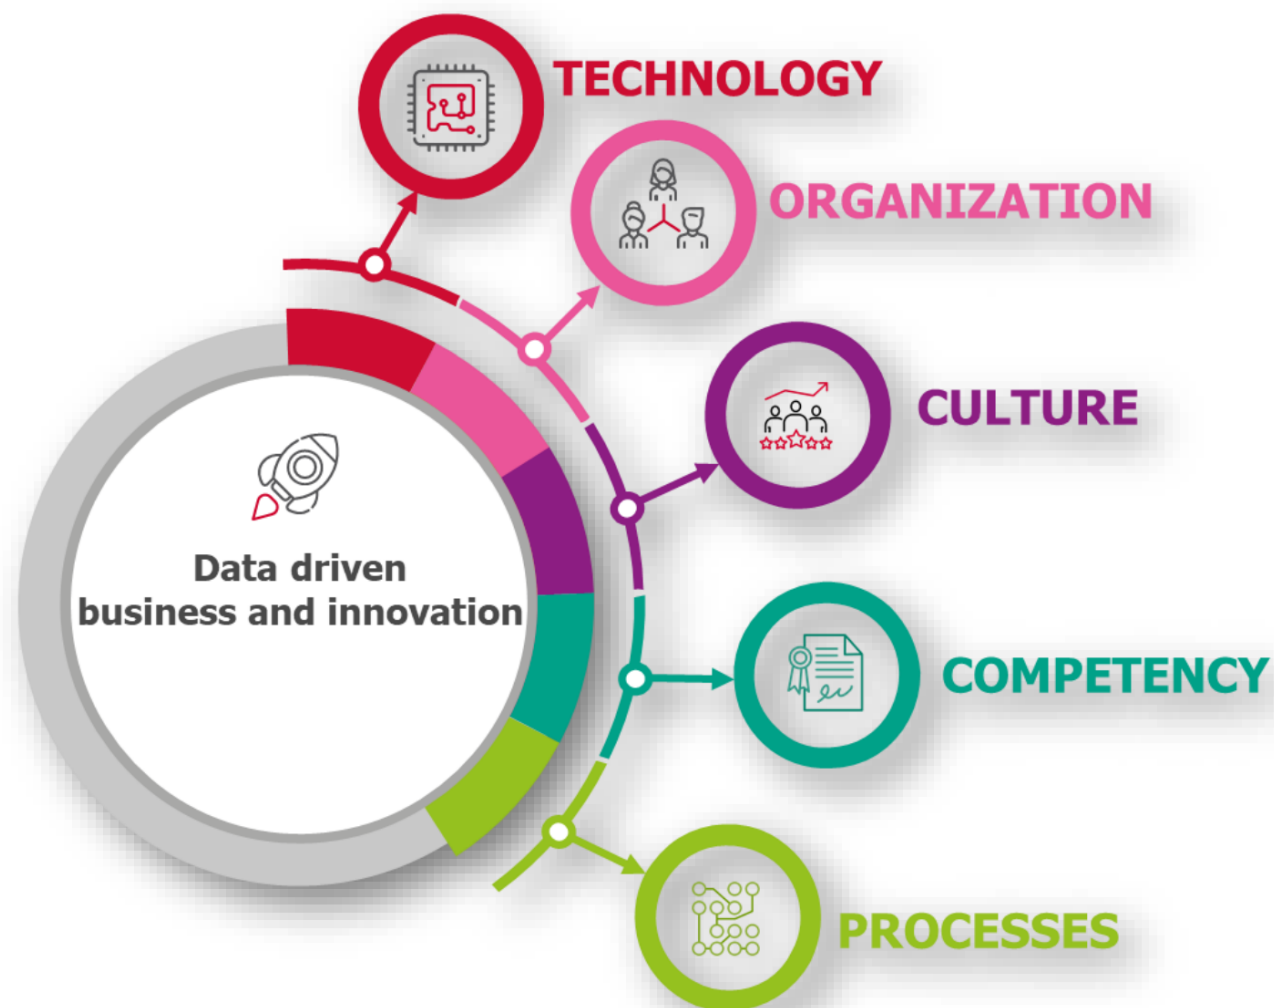

Financial and Accounting

Time / worklogs

Technical solution, but first

Visjon

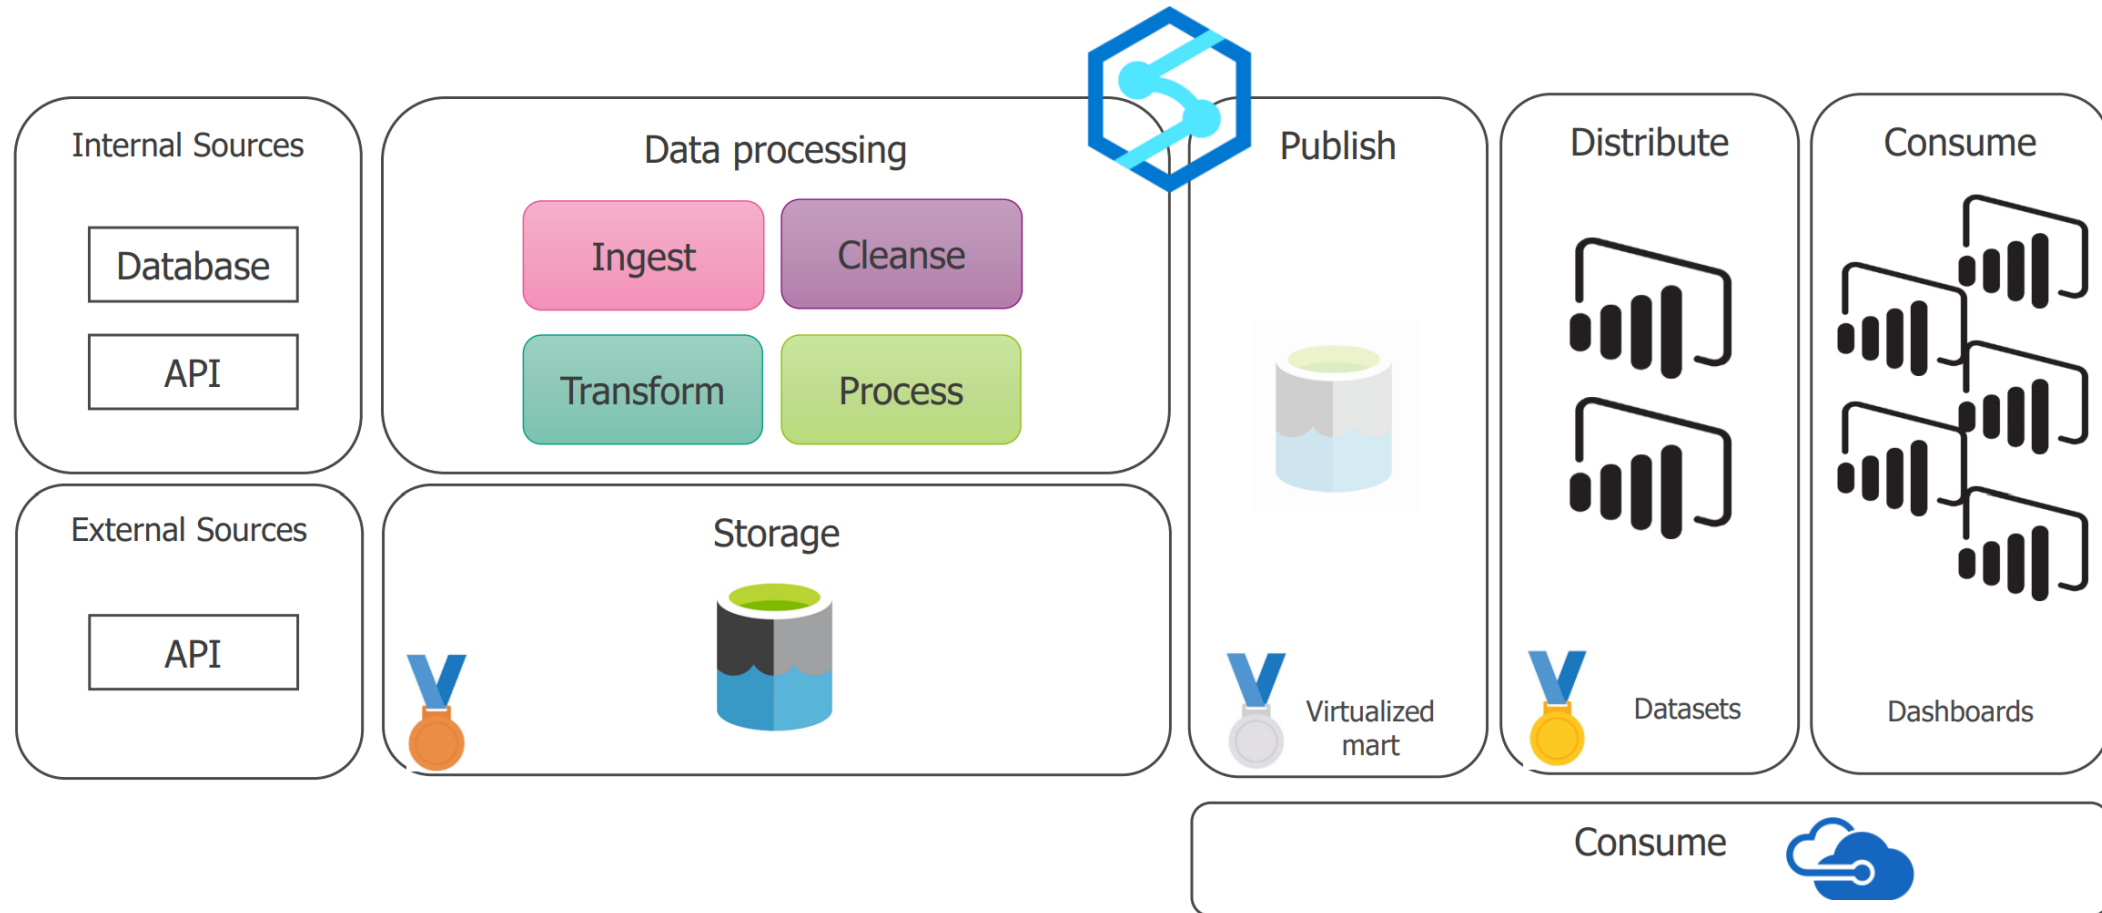

MVP Architecture

Platform A.I.R (Analytics, Insight, Reporting)

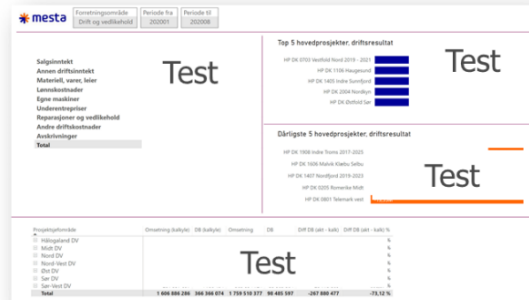

Medallion architecture

Data literacy

Data platform, Reports and Dashboards

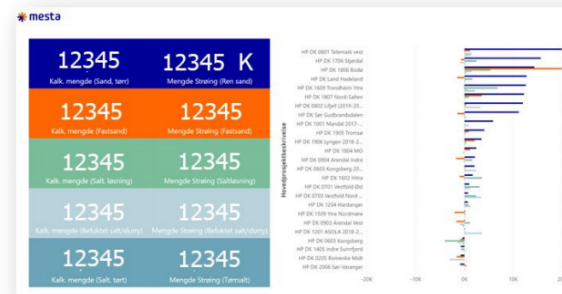

- Dashboard and alarm for “Unregistered production”

- Detailed Purchase / Expense dashboards

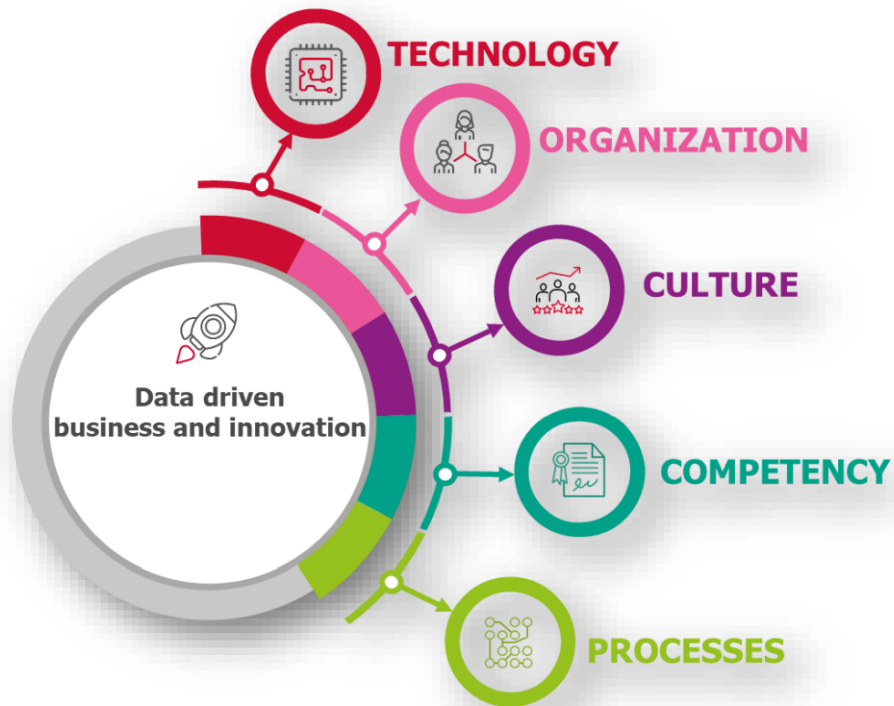

- Improved insight into financial data

Maturity and Transformation

- Data that already existed are now being used in a whole new way.
- The culture of Mesta has been disrupted: Mesta employees are much more interested in data and curious about what it can bring in their daily tasks.
 - Mesta have acquired the necessary capabilities to be more data driven.
- Agile way of work has been adopted, the way we work now is very different from 6 months ago.
- Both theoretical and practical skills have been learned, to help Mesta take ownership of the new way of work.

Continuous change and improvements

The journey has only just begun

The data driven journey of Mesta has started.
They are well prepped technologically, culturally
and organizationally to continue this journey.

There are a lot more eggs to be found

There are a lot more dots to be connected
